KYBELLA

FAT DISSOLVING TREATMENT

ABOUT TREATMENT

Deoxycholic acid is an enzyme that your body makes every day to dissolve and breakdown fat. Kybella is synthetic deoxycholic acid and is used to selectively treat pockets of unwanted fat. The most common treatment area is the submental area, or double chin. Once dissolved your body will naturally clean away fat remnants and remodel the treatment area. Kybella is the perfect treatment for individuals who want dramatic results without the downtime of more invasive treatment options.

Fat below the chin appears as a soft and squishy bulge or “double chin”, while excess skin will typically appear as lower hanging wrinkled skin or a “turkey gobbler”. The distinction is important because Kybella will lessen Fat but only mildly improve excess skin. Your skin’s reaction will be based on age and your skin’s natural elastic tone. Our expert physician will determine if you are a good candidate for Kybella injections.

BEFORE TREATMENT

- **Arnica Montana:** This is a supplement that can help prevent or lessen bruising should be started day(s) prior to treatment for best effect.
- **Aspirin / Ibuprofen avoidance:** If possible, skip Aspirin 2 weeks prior to your treatment. Avoid Ibuprofen or Aleve 3 days prior to procedure.
- **Numbing cream:** Apply 60 minutes prior to treatment.
- **Make sure scheduled visit is at least 2 weeks before any planned big events.**

AFTER TREATMENT

- **Ice on the affected area post-procedure in 15 minutes on, 15 minutes off intervals for the first 24 hours can help with swelling or pain.**
- **Makeup can be applied immediately after procedure if desired. For bruising a good concealer.**
- **Hot or burning sensation. This is the most intense for the first 5-15 minutes following injection.**
- **Swelling is an expected outcome of Kybella treatment and can vary from a little to a lot. Some patients may develop a large bulge of swelling or “bull-frog” look that can last 7-14 days.**
- **Tenderness. It is normal for treatment area to be sore and tender to the touch for the first 1-2 weeks following injections.**

POSSIBLE SIDE EFFECTS

- **Common:** Redness, swelling bruising, pain with injection, itching, firmness below chin
- **Rare:** Nerve Damage

Suggested Products: Tizo3 spf, EltaMD UV Clear or UV Daily spf, Arnica
