# NEUROTOXIN INJECTABLES

WRINKLE TREATMENT & PREVENTION

## ABOUT TREATMENT

---

The most popular treatment in facial aesthetics. Many individuals do not realize that Botox itself is a brand, not a treatment. It fits into a group of products that are referred to as neuromodulators or neurotoxins. Treatment involves a series of tiny injections just below the skin. The products, i.e. Botox, Dysport, Xeomin, Jeuveau block muscle movements essentially “freezing” the injection area. They are used to improve and smoothen the appearance of wrinkles that result from facial expression including: frown lines, forehead lines, and fine lines.

## BEFORE TREATMENT

---

- Neurotoxin injections are quick, easy, and nearly painless.
- Arnica Montana: If you have a history of bruising with injections. This is a supplement that can help prevent or lessen bruising should be started day(s) prior to treatment for best effect.
- Discontinue preventative Aspirin or blood thinners two weeks prior to appointment (check with your prescribing doctor prior to discontinuation).

## AFTER TREATMENT

---

- Avoid doing yoga or similar activities where head is below the rest of the body for any extended amount of time for several hours following treatment.
- Makeup can be applied immediately after procedure if desired.
- Avoid any rubbing or massaging of injection sites unless expressly instructed by your physician.
- Wear a Zinc-Titanium based physical sunscreen. To help protect your investment, be sure to always wear a physical sunscreen when outside.

## MONITOR FOR THE FOLLOWING

---

- Eyebrow heaviness or drooping (rare): A small amount of eyebrow heaviness is normal, especially for patients having their first set of injections. Severe heaviness or drooping is a rare complication. Contact your provider if this occurs.
- Asymmetry: Take note of any asymmetry that may occur with your injections. We can always add a few additional units to an area to help even things out. We may also make adjustments at your next appointment.

## POSSIBLE SIDE EFFECTS

---

- **Common (temporary):** Redness, swelling/bruising, pain around injection site
- **Rare (temporary):** Eyelid drooping, headaches, asymmetry

Suggested Products: Arnica Montana
