RESOLVE PICO LASER

REJUVENATION LASER

ABOUT TREATMENT

The PicoWay Resolve laser gets its name from the speed at which it works (picosecond). This fast delivery of pulses allows for dramatic results with minimal downtime. While this laser's primary function is tattoo removal, the Resolve capabilities rejuvenates the skin utilizing the newest advancements in laser technologies.

BEFORE TREATMENT

- **Sun Avoidance:** This is important leading up to your treatment. We cannot treat patients who have an active sunburn or have too much recent sun exposure.
- **Numbing Cream:** Resolve can be done without numbing cream, however we recommend numbing cream for comfort. A good layer of numbing should be applied to the treatment area 30 minutes prior to treatment.
- **Valtrex:** Let us know if you have a history of cold sores. Patients should be on a preventative five-day course of anti-viral medication that starts the day before your treatment to avoid a cold sore break out.
- **Bleaching Cream:** Many patients will be prescribed some form of a bleaching regimen leading up to their laser treatment. Use as directed by your provider leading up to appointment.

AFTER TREATMENT

- Some swelling for the 2-5 days following treatment is normal. To minimize swelling, sleep elevated the night after the laser treatment (put an extra pillow under head) and ice packs, 15 minutes on, 15 minutes off.
- Any discomfort you may have (usually not lasting more than a few hours, if any) can be relieved with acetaminophen (Tylenol).
- MILD REDNESS from 2-24 hours after treatment is very common.
- MILD HEAT. Sunburn feeling for 1-2 hours after treatment is expected. Icing as instructed above can help.
- Your BROWN SPOTS will flake off on their own like coffee grounds as you wash your face and shower over the next two (2) weeks. DO NOT scrub or exfoliate them to remove them.
- Moisturize. Apply gentle moisturizer twice a day until brown spots have fallen off and lightened. Larger spots may require an ointment-based moisturizer to avoid scabbing/crusting.
- Wait 12 hours post treatment before applying base or foundation makeup. Powder based makeups are usually recommended post procedurally as you may experience some textural changes in brown spots.

POSSIBLE SIDE EFFECTS

- **Common:** Redness, swelling, itching, peeling
- **Rare:** Scarring, hyperpigmentation, cold sores, rash

Suggested Products: Tizo3 or EltaMD UV Clear/Daily spf, Vaniply Ointment, Elta MD PM Therapy or SkinCeuticals Triple Lipid Restore, Elta MD Foaming Facial Cleanser, SkinCeuticals Discoloration Defense
