SCULPTRA

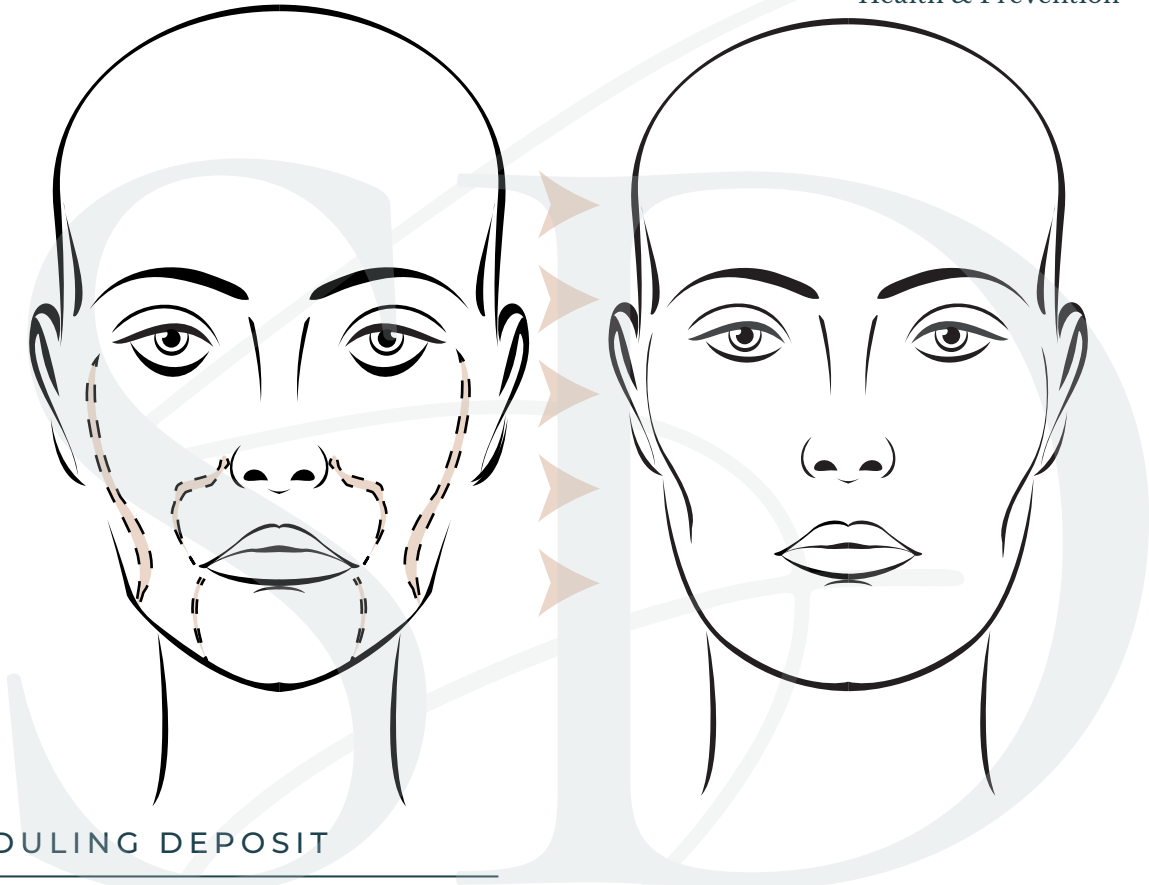

NATURAL COLLAGEN VOLUME BUILDING

ABOUT TREATMENT

While Sculptra is considered a filler, it is very different from the traditional dermal fillers. Sculptra works over time by stimulating new collagen production in the skin. It is the perfect treatment for overall facial volume loss as a result of aging or weight loss.

Sculptra for volume loss: Sculptra is performed as a series of injections that typically take place over the course of 6-12 months. Injections are spaced out every 6-12 weeks. Most patients will require roughly 3-7 vials of Sculptra to receive their best results. As there is continuous collagen breakdown over time, you will need a touch up treatment every 1-2 years to maintain your results.

Sculptra for preventative aging: One vial of sculptra every 1-2 years will replace the collagen you lose naturally with aging. Your early 20s is when collagen begins to disappear. One vial yearly is a secret to aging gracefully.

BEFORE TREATMENT

- **Arnica Montana:** If you have a history of bruising with injections. This is a supplement that can help prevent or lessen bruising should be started day(s) prior to treatment for best effect.
- **Aspirin / Ibuprofen avoidance:** If possible, skip Aspirin 2 weeks prior to your treatment. Avoid Ibuprofen or Aleve 3 days prior to procedure.
- **Optional: Numbing cream.** While it is not necessary and most patients do not use numbing, some patients find numbing cream helpful for any discomfort of injections. Apply 60 minutes prior to treatment.

AFTER TREATMENT

- Icing after your procedure in 15 minute on, 15 minute off intervals for the first 24 hours can help with swelling or pain.
- Makeup can be applied immediately after procedure if desired. For bruising a good concealer such as Dermablend is recommended.
- **Face Massaging (5-5-5 rule):** Starting the day of injections, massage face 5 times a day, for 5 minutes each time, for 5 days. This helps provide a better and smoother outcome
- Wear a Zinc-Titanium based physical sunscreen. UVA sun rays break down collagen, and can shorten the life expectancy of Sculptra. Help protect your investment

POSSIBLE SIDE EFFECTS

- **Common:** Redness, swelling/bruising, pain at injection site
- **Rare:** Formation of granulomas, skin necrosis, and potential asymmetry requiring further treatments

Suggested Products: Tizo3 spf, EltaMD UV Clear or UV Daily spf.
