PRF INJECTIONS

COLLAGEN STIMULATING VOLUME LOSS TREATMENT

ABOUT TREATMENT

PRF, or Platelet-Rich Fibrin, is an advanced treatment that harnesses your body's natural healing power to rejuvenate your skin. With the Selphyl® PRFM system, a small sample of your blood is drawn, similar to a routine blood test. This sample is then gently processed to concentrate your platelets and fibrin, which are rich in growth factors and essential for tissue repair and regeneration. This natural, golden-yellow solution is then artfully injected into areas needing revitalization. The fibrin creates a scaffolding that supports the platelets, allowing for a sustained release of these beneficial growth factors, helping to stimulate collagen production and promote a more youthful, radiant complexion.

BEFORE TREATMENT

- Drink 1-2 electrolyte drinks 24 hours before your treatment. Your hydration level will dictate how much product is obtained. A well hydrated patient will get 1 ml more PRF on average.
- Arnica Montana: If you have a history of bruising with injections. This is a supplement that can help prevent or lessen bruising. should be started 1-2 day(s) prior to treatment for best effect.
- Aspirin / Ibuprofen avoidance: If possible, skip Aspirin 2 weeks prior to your treatment. Avoid Ibuprofen or Aleve 3 days prior to procedure.
- Optional: Numbing cream. While it is not necessary and most patients do not use numbing cream, some patients find numbing cream helpful for any discomfort of injections. Apply 60 minutes prior to treatment.

AFTER TREATMENT

- Ice on the affected area post-procedure in 15 minutes on, 15 minutes off intervals for the first 24 hours, can help with swelling or pain.
- Makeup can be applied immediately after procedure if desired. For bruising, use a good concealer.
- Avoid any rubbing or massaging of injection sites unless expressly instructed by your physician.
- Wear a Zinc-Titanium based physical sunscreen. UVA sun rays break down dermal fillers and can shorten the life expectancy of fillers. Protect your investment! Wear a physical sunscreen when outside. Please note that traditional sunscreens are usually chemical based and do not block UVB rays sufficiently.
- If doing package of liquid PRF, return in 4-6 weeks for your next treatment.

POSSIBLE SIDE EFFECTS

- **Common:** Redness, swelling/bruising, pain at injection site
- **Rare:** Vision loss, formation of granulomas, skin necrosis, and potential asymmetry requiring further treatments

Suggested Products: Tizo3 SPF, EltaMD UV Clear or UV Daily SPF.
